

SCORE: Supply Chain Organizational Reporting Engagement

Consortium for Shippers,
Built by Shippers

Coming Soon: The SONAR Shipper Consortium

SCORE is a consortium designed for shippers that is aimed at providing them with a true apples-to-apples comparison of both **service and rates**. By contributing data, members will receive custom insights into their shipping operations while the supply chain industry gains reliable, comprehensive data backed by an army of experts.

With data specific to their business and freight profile, shippers can receive insights tailored to their unique needs and operations, helping them remain ahead of industry trends and changes with access to all of SONAR's multimodal domestic and global freight market data.

Contributing data to the SONAR ecosystem through the consortium allows for more specific benchmarking, enabling shippers to make informed, data-driven decisions based on the latest data available. It also enables shippers to become part of a community of shippers who are dedicated to growth and improvement in the industry.

Through SCORE, contributors will gain access to:

- + Shipment-level details (36 unique fields captured), allowing for specific lane- and network-level benchmarks
- + Stop-level details
- + Tender acceptance
- + Transaction data (financials)
- + Maritime shipments

Security and Technical Details

- + SONAR adheres to IOSCO principles
- + SONAR ensures that customer data is handled with the utmost security as we have SOC2 certification
- + Sharing data is as simple as having SONAR connect to your system of record for automatic file sharing
- + The SONAR team relies on understandings and learnings from the successful implementation of the Trusted Rate Assessment Consortium (TRAC), which is comprised of leading Fortune 1000 companies in the logistics space who contribute their load assignments daily in order for FreightWaves SONAR to produce spot rate full truckload benchmarks.
